Arun Kumaar Sreenivasan

Co-founder · Design Lead, Spera

Bengaluru, India · +91 94865 82579 · arunkumaar.srinivasan@gmail.com · kiruk.in · LinkedIn · GitHub · spera.bot

SUMMARY

Co-founder and Design Lead at **Spera**. I designed and shipped the product from scratch — brand, product UI, and design system in Next.js and TypeScript — and built the workflows that let a small team design, build, and verify faster. Previously UX Design Engineer on **HP Print AI** and **Mudra**, a design system adopted by **500+** employees.

EXPERIENCE

Spera — Co-founder, Design Lead · Remote · Feb 2026 – Present

- Designed and shipped **spera.bot** from sketch to production as Design Lead — brand, logo, product UI, and design system in Next.js and TypeScript.
- Built one design–develop–verify loop around **180** documented UI specs tied to global tokens: feedback arrives with screenshot and context linked to spec, doc, and skill; audits block off-spec pushes; curated skills cut recurring UI mistakes by **95%** — so bugs clear seamlessly and new screens start from proven patterns.
- Own the interaction system and UI polish — motion, micro-interactions, and per-component optimisation — so dense screens stay fast, legible, and consistent.
- Run research-to-review as a workflow: trader sessions and product analysis feed UX metrics and analytics, and every UI review closes with a recorded outcome that updates the spec.
- Built internal AI-assisted design tools — a prototyping interface for experimental components, design handoff to the coding agent, and AI-driven asset generation grounded in design foundations — so exploration lands in production instead of dying in Figma.

HP Inc — UX Design Engineer, Innovation for India · Bengaluru · Aug 2023 – Feb 2026
R&D Intern, Feb – Jul 2023

- Designed the consumer and B2B flows for **HP Print AI**, turning model, hardware, and cloud steps into the industry's first intelligent print experience.
- Built **Mudra**, the design system for Innovation for India, in Figma and Next.js — adopted by **500+** employees, with generative prompts that create images inside the stack.
- Shipped Get my Prints, a Flutter web app for doorstep print jobs, and Print Learn Center, a WhatsApp flow parents use to pull worksheets.
- As an R&D intern, built COE BOT in Spring Boot to generate Splunk dashboards and alerts for IoT printer fleets.

SNS Square — SME and Design Lead, Square Bridge · Remote · Feb 2023 – Jul 2023

- Led 3 designers on Square Bridge for students, recruiters, and placement officers — one system, **150+** screens, and usability tests with **200+** candidates.

PeopleGamez.com — Interaction Design Intern · Remote · Nov 2022 – Jan 2023

- Designed gamified HR flows for 4Plantz and Motivuz — interaction models, **100+** game assets, and performance-report dashboards.

SKILLS

Product design, Design systems, Interaction design, UX research, UX analytics, Prototyping, Motion, Accessibility, Figma, Next.js, React, TypeScript, Tailwind, Flutter, AI UX

EDUCATION

B.E. Computer Science and Engineering, Sona College of Technology · 2019 – 2023 · CGPA 8.9/10

ADDITIONAL

UX and UI workshops for 100+ students. Freelance branding and product design, 2020 – 2023.
