ARUN KUMAAR SREENIVASAN

Co-founder & Design Engineer · Bengaluru, India

kiruk.in · LinkedIn · GitHub · spera.bot
arunkumaar.srinivasan@gmail.com · +91 94865 82579

Designer who ships. Co-founder and the only designer at Spera, an algorithmic-trading platform, from brand through production code. Previously UX Design Engineer on HP Print AI.

EXPERIENCE

Co-founder & Design Engineer

Spera (Remote) · Feb 2026 – Present

- **Founding design.** Co-founded Spera and owned the design end to end as its only designer, spanning brand, product, design systems, motion, and shipped frontend code across **4 applications** and a **1,000+ component** interface.
- **Design systems.** Architected **235 semantic tokens**, **180+ component specs**, and foundations for color, type, spacing, radius, elevation, and motion. Every spec ships with its component, and **6 automated checks** enforce the standards in CI.
- **Conversational AI.** Designed the experience for a product where a wrong move costs real money. The assistant proposes before it acts, approval is explicit, and every agent-authored edit is reversible. Traders can also run Spera from Claude, Cursor, or Codex through the MCP adoption surface.
- **Data visualization.** Designed the decision surfaces: equity curves, trade ledgers, rejection reports, and head-to-head comparison. Refined the comparison view through **six subtractive passes** until the verdict lands before the numbers.
- **Brand.** Created the Spera glyph, a **three-variant logo system** with contrast and clear-space rules, a dark-first color system, and a locked type hierarchy, on a **44-document** brand system covering message, voice, governance, and distribution.
- **AI design automation.** Built and directed an AI production designer that assembles marketing and motion from real product components, renders the pixels, critiques the output, and hands off editable files. A compliance failure cannot auto-publish, and every correction becomes a written law the agent reads before it writes.

UX Design Engineer, Print AI & Cloud Platforms

HP Inc. (Bengaluru) · Aug 2023 – Feb 2026

- **Product innovation.** Key contributor to **HP Print AI**, the industry's first intelligent print experience. Designed the consumer and B2B flows, translating complex AI logic into human-centered workflows.
- **Design systems.** Built **Mudra**, the design system and branding for HP's internal AI Stack, in Next.js and Figma. **500+ employees** use it, with generative prompts for text-to-image assets inside the stack.
- **Mobile.** Led end-to-end design and engineering of **Get my Prints**, a Flutter web UI for doorstep print jobs, reducing onboarding friction and improving conversion for consumer and B2C customers. Shipped Print Learn Center, a WhatsApp flow parents use to pull worksheets.
- **Scale.** Designed **Splunk dashboards** monitoring telemetry across **millions of IoT printers**. Shipped **15+ hackathon solutions** and **7+ cloud microservices** with product, AI, and engineering.

R&D Intern (Feb 2023 – Jul 2023)

- Built **COE Bot** in Spring Boot to generate Splunk dashboards and alerts for those printer fleets.

Product Design SME & Technical Lead

SNS Square (Remote) · Feb 2023 – Jul 2023

- **Strategy.** Defined UX for **Square Bridge** across students, recruiters, and placement officers. Research with **200+ candidates** led to a Portfolio Builder that **lifted engagement 45%** and dashboards that **cut discovery time 40%**.
- **Systems.** Built one design system and **150+ screens**, mentored **3 designers**, and handed off to Node.js engineering at **98% design-to-code** accuracy.

Interaction Design Intern

PeopleGamez.com (Remote) · Nov 2022 – Jan 2023

- Designed gamified HR flows for 4Plantz and Motivuz, including **100+ game assets** and performance dashboards.

SKILLS

Design: Design systems, design tokens, interaction design, motion, brand identity, data visualization, conversational AI, user research, accessibility, prototyping
Engineering: React, Next.js, TypeScript, Tailwind CSS, Framer Motion, Flutter, Node.js, Spring Boot, MDX, CI/CD
AI: Claude Code, agent skills, MCP, prompt engineering, generative asset pipelines
Tools: Figma, Blender, Lottie, Playwright, Splunk

EDUCATION

B.E. Computer Science and Engineering, Sona College of Technology — **2019 – 2023 · CGPA 8.9/10**
